

## Transport Compliance Services approved to provide On-Board Mass (OBM) systems linked to the IAP

IAP Service Provider Transport Compliance Services (TCS) is pleased to announce it has obtained approval from Transport Certification Australia (TCA) to support On Board Mass (OBM) systems linked to the IAP.

The use of IAP linked to approved OBM systems give transport operators the opportunity to unlock significant productivity and profitability gains, utilising high productivity vehicles and additional routes.

With TCS entering the OBM market, operators can utilise the approved Tramanco **CHEK-WAY**® Scale Systems with TCS's IAP services. The system provides real time monitoring of each axle group mass, allowing transport operators to increase payload on combinations, in consultation with their Jurisdiction.

TCS is a joint venture company owned by MTData, ISS and KeyTrust. The TCS IAP In-Vehicle Unit is manufactured by MTData.

MTData is an industry leader in GPS tracking and fleet telematics with Australian made software, hardware and services. MTData's comprehensive product suite enables businesses to have a fully integrated fleet management solution including trailer tracking, engine management interface and compliance modules.

Tramanco has been an Australian specialist in supply and installation of on-board weighing systems for heavy vehicles since 1975. The **CHEK-WAY**® scales have repeatable accuracy, longevity and password protection, providing a new level of management control and opportunity to manage route and mass compliance.

TCS looks forward to working with Transport Operators for their IAP Monitoring Services and Interim On Board Mass systems.
